

Parsing JSON to CSV with OpenRefine

Example: University of Minnesota Libraries UMedia Repository records
Broadcasting A/V Data project

Open the JSON file with program records. In this case, the JSON file is showing the program records for the 20 objects on page 3 of results.

Maggie Kuhn and John Brantner, *The Sickness of Ageism*

Description: That was Maggie Kuhn, National Conveener of the Gray Panthers. Earlier you heard University of MINnesota psychiatry professor John Brantner.

Creator: University of Minnesota. Radio Station KUOM

Contributor: Kuhn, Maggie; Brantner, John; Larson, Curtis (Engineer); Marlow, Andrew (Producer)

Created: 1981-07-21

Contributed By: University of Minnesota Libraries, University Archives.

Last Updated: 2017-11-28

```

Download the JSON file
with 20 individual radio
program records.

Create Project

Open Project

Import Project

Language Settings

Create a project by importing data. What kinds of data files can I import?

TSV, CSV, *SV, Excel (.xls and .xlsx), JSON, XML, RDF as XML, and Google Data documents are all supported. Support for other formats can be added with OpenRefine extensions.

Get data from

Locate one or more files on your computer to upload:

This Computer

Choose Files

UMN search json p3.json

- ☐ Load at most
- ☒ Preserve empty strings
- ☐ Trim leading & trailing whitespace from strings
- ☐ Parse cell text into numbers, dates, ...
- ☐ Store file source (file names, URLs) in each row

Select the object to represent the level at which you want OR to parse. By clicking where the first curly bracket is, I am telling OR to parse the key-value pairs of each object into column name and value, with one record for each program record (20 total records). You will not need to change any other settings for a JSON file like this one.

All	_ - id	_ - type	_ - title	_ - object	_ - title_s	_ - title_t	_ - s
1.	p16022coll171:290	Sound	Carter Woodson	https://cdm16022.contentdm.oclc.org/utis/getthumbnail/collection/p16022coll171/id/290	Carter Woodson	Carter Woodson	p1602
2.	p16022coll171:291	Sound	The Wistful Weasel	https://cdm16022.contentdm.oclc.org/utis/getthumbnail/collection/p16022coll171/id/291	The Wistful Weasel	The Wistful Weasel	p1602

OpenRefine has correctly divided up the records, giving us 20 records, with one ID per record.

OpenRefine has also correctly parsed out multi-valued key-value pairs from the JSON file into multi-valued cells in the tabular format, as opposed to storing them as a single string in one cell. You can leave these divided into multiple rows or join them by using the join multi-valued cells feature, depending on how you will use the tabular data.
